Employment History

Full Stack Engineer | Targeted Technologies, *Nov 2021 – Present*

- Engineered responsive, secure, and accessible web applications utilizing TypeScript and Next.js, tailoring features to strict client specifications.
- Architected robust backend services and RESTful APIs using Python (Django/FastAPI) and SQL, applying strict database normalization to optimize data retrieval and system performance.
- Managed complex version control operations utilizing Git and maintained Linux-based environments, enforcing security best practices through rigorous peer code reviews.

Assets Protection Specialist | Target Corporation, *Oct 2025 – Mar 2026*

- Audited operational procedures and physical inventory data to identify systemic vulnerabilities and mitigate corporate liability.
- Conducted complex, high-stakes investigations requiring strict adherence to legal standards, company policy, and ethical compliance, and increased law enforcement response time by 15%.
- Partnered with cross-functional teams and external law enforcement to resolve security escalations and neutralize physical and financial risks.

Business Analyst | Red Dirt Outdoor Equipment, *Jan 2020 – Mar 2025*

- Analyzed financial and operational data across sales, service, accounting, and rentals to pinpoint underperforming areas, while simultaneously managing IT systems to ensure the integrity and availability of critical business data, increasing profitability by 22%.
- Evaluated cross-departmental workflows to identify process gaps, designing and executing targeted action plans that improved overall organizational efficiency.
- Collaborated with external vendors to scope, develop, and implement customized software solutions, streamlining dealership operations and directly increasing profitability.

Assistant Store Manager, Asset Protection | Walmart Stores, *Jul 2017 – Nov 2021*

- Analyzed complex inventory and Point of Sale (POS) data to identify anomalous trends, directing a 25-person team to execute targeted audits that achieved a record-low 0.75% annual shrinkage rate.
- Investigated systemic vulnerabilities and procedural gaps, utilizing evidence-based interviewing techniques to resolve complex internal fraud cases, mitigate liability, and recover corporate assets.
- Engineered data-driven risk mitigation protocols and managed physical security systems, driving a 20% reduction in workplace safety incidents while ensuring strict regulatory compliance.

Education

Bachelor of Science in Software Engineering | College of Computing and Software Engineering at Kennesaw State University, *Jan 2023 – May 2027*

Technical Skills

- | | | |
|--------------|----------------|-----------------------------------|
| • TypeScript | • Django | • Data Structures & Algorithms |
| • Python | • FastAPI | • Database Design & Normalization |
| • Java | • Linux | • Network Security |
| • SQL | • Git | |
| • Next.js | • Cryptography | |

Certifications

Interview and Interrogation Techniques | Wicklander-Zulawski & Associates, *Sep 2017*

- Validates expertise in evidence-based, non-confrontational interviewing methods to ethically gather facts, resolve investigations, and obtain truthful admissions while minimizing conflict.
