

Employment History

Full Stack Developer, Targeted Technologies 01/2021 – Present

- Administered and secured Linux-based environments, enforcing strict access controls and security best practices to mitigate system vulnerabilities.
- Implemented robust security protocols—including Zero-Knowledge Architecture, OAuth2, and AES-256-GCM encryption—to safeguard sensitive data and securely authenticate user access.
- Managed backend infrastructure and SQL databases, optimizing data retrieval processes and ensuring the integrity and availability of critical systems.

Asset Protection Investigator, Walmart 05/2026 – 09/2026

- Conducted comprehensive internal and external investigations to identify and apprehend theft suspects, actively reducing facility shrinkage and successfully referring high-value cases for criminal prosecution.
- Acted as the primary law enforcement liaison, partnering with local agencies to resolve critical security escalations and successfully increasing law enforcement response time by 15%.
- Managed day-to-day safety, physical security, and regulatory compliance for the facility, mitigating corporate liability through strict adherence to legal and company policy standards.

Business Analyst, Red Dirt Outdoor Equipment 01/2020 – 03/2025

- Managed daily IT operations and data systems, safeguarding the availability of critical business data while simultaneously supporting sales, service, and accounting workflows.
- Acted as the primary technical liaison with external software vendors, overseeing the end-to-end development and rollout of custom applications that directly increased dealership profitability.
- Evaluated organizational processes to troubleshoot workflow bottlenecks, designing technical interventions and systems solutions that closed process gaps.

Assistant Store Manager - Asset Protection, Walmart 07/2017 – 11/2021

- Directed a 25-person team in executing targeted audits by analyzing complex inventory and Point of Sale (POS) data, successfully achieving a record-low 0.75% annual shrinkage rate.
- Resolved complex internal fraud cases by utilizing evidence-based interviewing techniques to investigate procedural gaps, mitigate organizational liability, and recover assets.
- Engineered proactive, data-driven risk mitigation protocols and managed site-wide physical security systems, driving a 20% reduction in workplace safety incidents.

Education

B.S. Software Engineering, Kennesaw State University College of Computing and Software Engineering

Est. 08/2027

Skills

Risk Mitigation, Root Cause Analysis, Internal & External Investigations, Regulatory Compliance, SQL Database Management, Python, Typescript, OpenAI, Vercel, Cloudflare, Linux, Unix.
